

Follow up to January 21, 2011 Telemeeting:

### **GA-II Surveys**

- Thanks to all for the discussion of GA-II this afternoon.
- The intake and interval surveys for GA-II have been revised, with the changes made based on meeting conversation highlighted in green.
- In addition, ALTE as a symptom has been added as detailed nicely in Dr. Burton's 2007 article accidentally omitted it on the earlier draft).

Two articles have been provided with this communication, one citing the extrapyramidal movements in GA-II and the other describing some MR findings in GA-II.

### **MR Imaging**

- Please review the (very short) imaging report and provide feedback to Kristi Bentler, by 01/31/11
  - Should the questions be changed or added to?
  - The 4 condition specific imaging questions are currently in the system are as follows. I believe the other findings below came from more than one source.
    - a) Is there evidence of basal ganglia injury?  
Missing/unknown data, N/A, imaging not done, no, yes, on CNS imaging done since last outpatient metabolic visit
    - b) Is there evidence of bat-wing appearance?  
Missing/unknown data, N/A \*, imaging not done, no, yes, widened sylvian fissures on CNS Imaging done since last outpatient metabolic visit
    - c) Is there evidence of leukodystrophy?  
Missing/unknown data, N/A \*, imaging not done, no, yes, widened sylvian fissures on CNS Imaging done since last outpatient metabolic visit
    - d) Is there evidence of cerebral cortex  
Missing/unknown data, N/A \*, imaging not done, no, yes, widened sylvian fissures on CNS Imaging done since last outpatient metabolic visit
